UNDERSTANDING THE MISSION AND ACCEPTING THE CHALLENGE

Dfuse promotes a unified journey that ensures customer success. To accommodate each client's unique vision, goals, resources, challenges, infrastructure, and culture, we have developed a business structure with no boundaries. When you engage Dfuse, you hire a company of experts, not an individual. We foster empowerment, synergy, and collective thinking. Our approach has resulted in repeat business with numerous satisfied clients, and 30% to nearly 100% growth per year for the last several years.

CONSULTING — PROJECT MANAGEMENT SUPPORT · SERVICE ORIENTED ARCHITECTURE · DATA ARCHITECTURE & ANALYSIS · SOFTWARE DEVELOPMENT

BUSINESS SOLUTIONS IN A DATA-DRIVEN AGE

FLARE

Secure, containerized, and automated DevSecOps innovation platform to rapidly create CI/CD pipelines with zero trust principles
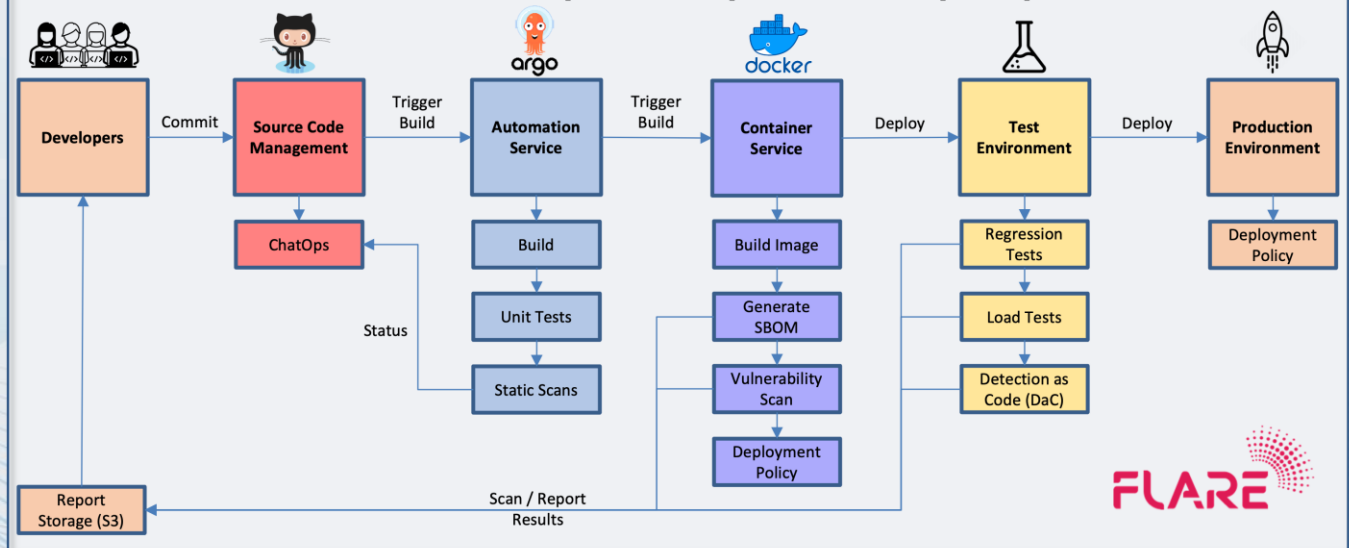

WHAT IS FLARE?

Flare is a DevSecOps as a Service solution to accelerate cloud pipeline deployments across systems. It spans the full life-cycle for DevSecOps, DataOps, and MLOps pipelines including deployment automation, patching, and upgrades throughout the life of the program.

BENEFITS OF FLARE

✓ Includes all pipeline builds, scripts, and deployments across domains/clouds
✓ The "glue" that accelerates the DevSecOps CI/CD pipeline deployment process
✓ No additional accreditation overhead anticipated
✓ Engineered leveraging a Zero Trust approach to ensure security is built-in from Day One

Automated DevSecOps, DataOps, and MLOps Pipelines

Flare is tool-agnostic; the above-referenced tools are for functional representation purposes only

DID YOU KNOW?

Flare technology was used to automate the deployment of DevSecOps CI/CD pipelines in support of agile teams delivering critical Intelligence Community (IC) mission capabilities

FLARE'S IMPACT ON SAMPLE DEVSECOPS TASKS

Sample Tasks	Duration
Build & Deploy CI/CD Pipeline	80% savings
Build & Deploy DataOps Pipeline	75% savings
Build & Deploy MLOps Pipeline	71% savings
Build, STIG, & scan system containers	43% savings
